20001 to 20229—Continued.

20136. Amelanchier sp (?).

From the mountains of northern Korea. "(No. 411a, Aug., 1906.) A shrub bearing small, inedible fruits like crab apples and with leaves like a small *Viburnum opulus*. Seems to prefer shady spots in the higher altitudes." (*Meyer*.)

20137. MALUS SD.

Crab apple.

From the mountains of northern Korea. "(No. 412a, Aug. 20, 1906.) A few seeds of a wild crab apple bearing very small, hard fruits. Grows usually as a shrub, but in sheltered places becomes a tree." (Meyer.)

20138. Euonymus sp.

From the mountains of northern Korea. "(No. 413a, Aug. 28, 1906.) A small-leaved, hardy Euonymus, growing very compactly." (Meyer.)

20139. Euonymus sp.

From the mountains of northern Korea. "(No. 414a, Aug. 28, 1906.) A dense-growing, small-leaved bush, with corky wings along its branches." (Meyer.)

20140. Euonymus sp.

From the mountains of northern Korea. "(No. 415a, Aug. 9, 1906.) A large-leaved Euonymus growing in dense shade in the forest and bearing four-winged fruits." (Meyer.)

20141. LONICERA SD.

Honeysuckle.

From the mountains of northern Korea. "(No. 416a, Aug. 12, 1906.) A large-leaved Lonicera, with large, scarlet berries." (Meyer.)

20142. LONICERA Sp.

Honevsuckle.

From the mountains of northern Korea. "(No. 417a, Aug. 12, 1906.) A medium-sized, bushy honeysuckle growing in large masses and bearing scarlet berries." (Meyer.)

20143. LONICERA SD.

Honeysuckle.

From the mountains of northern Korea. "(No. 418a, Aug. 12, 1906.) A low, bush honeysuckle with bright green, medium-sized leaves and scarlet berries." (Meyer.)

20144. LONICERA Sp.

Honeysuckle.

From the mountains of northern Korea. "(No. 419a, Aug. 21, 1906.) A bushy honeysuckle growing 10 to 12 feet high; leaves larger and darker green than the ordinary type." (Meyer.)

20145. Lonicera sp.

Honeysuckle.

From Bo-tau-shan Mountains, northern Korea. "(No. 420a, Aug. 24, 1906.) A low, shrubby honeysuckle, 3 to 4 feet high, bearing pretty blue berries of repulsive taste. These shrubs grow only at high altitudes and may be used in the colder parts of the United States as ornamental garden shrubs." (Meyer.)

20146. LONICERA Sp.

Honeysuckle.

From Sa-mai-tsi, Manchuria. "(No. 421a, July 27, 1906.) A large, bushy honeysuckle, becoming somewhat shaggy when old. When young, however, it is a fine shrub, bearing thousands of small, white, fragrant flowers." (Meyer.)

20147. Alnus sp.

Alder.

From the mountains of northern Korea. "(No. 422a, Sept. 1, 1906.) A large-leaved alder growing along water courses; quite a handsome shrub." (Meyer.)
